However, these conventional power tools require a means of introducing or advancing a fastener into a material being worked. Power tool drivers that are used with fastener-feeding devices, such as screw-driving devices, are designed for ease of use with fastener-driving devices, as opposed to the power tool itself. For example, power tool drivers can be designed to be suitable for specific fastener-driving devices. It would be time-consuming and inconvenient for a user to adjust the driver to be suitable for a given fastener-driving device. Prostaglandins and peripheral vascular tone. Prostaglandins are released by certain tissues and act on specific receptors on vascular smooth muscle to contract this muscle. Prostaglandin levels in vivo can be increased by a variety of stimuli and changes in the adrenergic tone can alter the response of the vasculature to

The present study examined the effects of repeated methylphenidate administration on cocaine self-administration, cue-induced reinstatement of cocaine-seeking behavior, and the effects of repeated methylphenidate administration on locomotor activity in rats trained to self-administer cocaine. Methylphenidate (0.4 mg/kg) was administered to two different groups of rats: one group of rats self-administered cocaine for 2 hr/day; and a second group of rats self-administered cocaine for 2 hr/day and were administered methylphenidate (0.4 mg/kg) at the end of the session. The third group of rats were injected with saline and given no cocaine. After a 10-day treatment regimen, cocaine self-administration was decreased significantly in the methylphenidate treated groups compared to saline-treated rats. Furthermore, whereas the rats injected with methylphenidate demonstrated a significantly lower rate of responding for cocaine-associated cues compared to saline-treated rats, the group of rats injected with saline and given no cocaine did not demonstrate a decreased rate of responding for cocaine-associated cues. The results suggest that methylphenidate decreases cocaine self-administration in the
